Samsung WE VoIP
The Mobile Application for the Enterprise WLAN Environment

Optimized Enterprise Communications for a More Productive and Agile Business Environment

Samsung WE VoIP is a smartphone application that provides corporate users voice-over-IP communications over private Wi-Fi networks when in the office and public Wi-Fi or 4G/LTE network when out of the office. It is equipped with High Definition (HD) voice technology, 3G dialer and full-featured phone functionality to bring professionals a convenient, easy-to-use, and crystal clear voice experience.

Through the Samsung Communication Manager (SCM) or Samsung OfficeServ 7000 Series phone systems, this application turns your mobile device into a full-featured Samsung IP phone, providing conference calling, transferring, call back later, and hold functions over your corporate Wi-Fi network
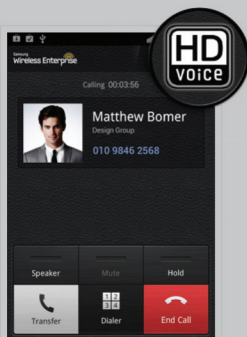

KEY BENEFITS

✓ Crystal clear call quality among WE VoIP users
✓ Local/international calls and mobile minutes savings
✓ Ability to use work phone numbers on your mobile
✓ Full-featured business phone functionality such as conference, transfer, hold, later and wait

Available at
Google Play Store

HD Voice among WE VoIP Users

Integrated Mobile and VoIP Dialing

Full-Featured Business Phone Functionality

SAMSUNG

COMBINED MOBILE AND VOIP DIALING

Equipped with a 3G dialer, Samsung WE VoIP can operate just like a standard mobile phone with a log management that conveniently let users distinguish between mobile and VoIP phone calls. Both modes are fully integrated, making it possible to receive or reject incoming calls even when users are in VoIP mode.

HIGH DEFINITION (HD) VOICE QUALITY

Samsung exclusive HD voice technology operates with wideband and super wideband codec such as AMR-WB and Silk to deliver enhanced voice quality among Samsung WE VoIP users.

GREATER FLEXIBILITY WITH CALL CONTROL

Multiple options are available to offer a more flexible communications experience. Users can elect to "Receive" or "Reject" incoming calls, or to postpone those via the "Hold" function, or just to "Call back later". Additional functionality includes teleconferencing, speakerphone and recording capabilities for further convenience.

BUSINESS CALLER ID DISPLAY

Business Caller ID is displayed with names, job titles and photos, making for a better organized mobile address book.
